

## Appendix B

# Electroacoustic Glossary of Symbols

$a$	Radius (m), Equivalent piston radius of diaphragm (m)
$B$	Magnetic flux density (T), Parameter in QB3 vented-box alignments, Parameter in cardioid microphone pattern, Mass loading factor, Parameter in low-pass to band-pass frequency transformation
$B2$	2nd-order Butterworth infinite-baffle and closed-box alignment
$B4$	4th-order Butterworth vented-box alignment
$c$	Velocity of sound (345 m/s, 1131 feet/s)
$C_A$	Acoustic compliance ( $\text{m}^5/\text{N}$ )
$C_{AB}$	Acoustic compliance of volume $V_{AB}$ ( $\text{m}^5/\text{N}$ )
$C_{AP}$	Acoustic compliance of passive radiator suspension ( $\text{m}^5/\text{N}$ )
$C_{AS}$	Acoustic compliance of diaphragm suspension ( $\text{m}^5/\text{N}$ )
$C_{AT}$	Total acoustic compliance of diaphragm suspension and enclosure ( $\text{m}^5/\text{N}$ )
$C_{A1}$	Acoustic compliance in circuit for piston air load impedance ( $\text{m}^5/\text{N}$ )
$C_E$	Electrical capacitance (F)
$C_M$	Mechanical compliance (m/N)
$C_{MS}$	Mechanical compliance of diaphragm suspension (m/N)
$C2$	2nd-order Chebyshev alignment
$C4$	4th-order Chebyshev vented-box alignment
$D_{KE}$	Kinetic energy density ( $\text{J}/\text{m}^3$ )
$D_{PE}$	Potential energy density ( $\text{J}/\text{m}^3$ )
$e, E$	Electrical voltage (V)
$f$	Force (N), Frequency (Hz)
$f_B, \omega_B$	Helmholtz resonance frequency of vented box (Hz, rad/s)
$f_C, \omega_C$	Closed-box system resonance frequency (Hz, rad/s)
$f_\ell, \omega_\ell$	Lower -3 dB cutoff frequency (Hz, rad/s)
$f_S, \omega_S$	Resonance frequency of driver in infinite baffle (Hz, rad/s)
$f_u, \omega_u$	Upper -3 dB cutoff frequency (Hz, rad/s)
$f_{u1}, \omega_{u1}$	Upper -3 dB cutoff frequency in pressure response of driver (Hz, rad/s)
$f_{u2}, \omega_{u2}$	Upper -3 dB cutoff frequency in power response of driver (Hz, rad/s)
$G(s)$	Infinite-baffle low-frequency pressure transfer function
$G_{BP4}(s)$	Fourth-order bandpass system low-frequency pressure transfer function
$G_C(s)$	Closed-box low-frequency pressure transfer function
$G_V(s)$	Vented-box low-frequency pressure transfer function
$h$	Vented-box system Helmholtz tuning ratio ( $f_B/f_S$ )
$I$	Acoustic intensity ( $\text{W}/\text{m}^2$ )
$k$	Wavenumber ( $\text{m}^{-1}$ ), Parameter in C4 vented-box alignments, Mutual coupling coefficient

$k_{\text{pad}}$	L-pad voltage division ratio
$l$	Length (m), Effective length of voice-coil wire that cuts air-gap flux (m)
$l_f$	Flanged end correction (m)
$l_{uf}$	Unflanged end correction (m)
$L_P, L_V$	Port or vent length (m)
$L_e$	Constant in equation for impedance of lossy voice-coil inductance
$L_E$	Electrical inductance (H)
$m, M$	Constants in equation for cross-sectional area of acoustic horn
$M_A$	Acoustic mass ( $\text{kg}/\text{m}^4$ )
$M_{A1}$	Acoustic mass in circuit for piston air load impedance ( $\text{kg}/\text{m}^4$ )
$M_{AB}$	Acoustic mass of air in box ( $\text{kg}/\text{m}^4$ )
$M_{AC}$	Acoustic mass of diaphragm and air load for driver on a box ( $\text{kg}/\text{m}^4$ )
$M_{AD}$	Acoustic mass of diaphragm ( $\text{kg}/\text{m}^4$ )
$M_{AS}$	Acoustic mass of diaphragm and air load for driver on infinite baffle ( $\text{kg}/\text{m}^4$ )
$M_M$	Mechanical mass (kg)
$M_{MC}$	Mechanical mass of diaphragm and air load for driver on a box (kg)
$M_{MD}$	Mechanical mass of diaphragm (kg)
$M_{MS}$	Mechanical mass of diaphragm and air load for driver on infinite baffle (kg)
$n$	Constant in equation impedance of lossy voice-coil inductance
$p$	Acoustic pressure (Pa)
$p_D$	Acoustic pressure difference (Pa)
$p_{\text{ref}}$	Reference pressure for <i>SPL</i> ( $2 \times 10^{-5}$ Pa)
$p_{\text{sens}}^{1V}$	On-axis pressure sensitivity for $e_g = 1$ V and $r = 1$ m (Pa)
$P$	Total pressure (Pa), Power (W), Phons
$P_A$	Acoustic power (W)
$P_{AR}$	Acoustic power radiated (W)
$P_E$	Electrical power (W)
$P_0$	Static air pressure ( $1.013 \times 10^5$ Pa)
$q$	$f_l/f_s$ for vented-box system
$Q$	Quality factor
$Q_{EC}$	Closed-box system electrical quality factor
$Q_{ES}$	Infinite-baffle system electrical quality factor
$Q_L$	Vented-box enclosure quality factor
$Q_{MC}$	Closed-box system mechanical quality factor
$Q_{MS}$	Infinite-baffle system mechanical quality factor
$Q_{TC}$	Closed-box system total quality factor
$Q_{TS}$	Infinite-baffle system total quality factor
$QB3$	Quasi-Butterworth 3rd-order vented-box alignment
$R_A$	Acoustic resistance ( $\text{N}\cdot\text{s}/\text{m}^5$ )
$R_{AB}$	Acoustic resistance that models closed-box losses ( $\text{N}\cdot\text{s}/\text{m}^5$ )
$R_{AC}$	$R_{AS} + R_{AB}$ ( $\text{N}\cdot\text{s}/\text{m}^5$ ) for closed-box system
$R_{AE}$	Acoustic resistance that models electrical losses ( $\text{N}\cdot\text{s}/\text{m}^5$ )
$R_{AL}$	Acoustic resistance that models air leak ( $\text{N}\cdot\text{s}/\text{m}^5$ )
$R_{AS}$	Acoustic resistance that models suspension losses ( $\text{N}\cdot\text{s}/\text{m}^5$ )
$R_{AT}$	$R_{AE} + R_{AS}$ ( $\text{N}\cdot\text{s}/\text{m}^5$ ) for infinite-baffle system
$R_{ATC}$	$R_{AE} + R_{AC}$ ( $\text{N}\cdot\text{s}/\text{m}^5$ ) for closed-box system
$R_{A1}, R_{A2}$	Acoustic resistors in circuit for piston air load impedance ( $\text{N}\cdot\text{s}/\text{m}^5$ )
$R_E$	Electrical resistance ( $\Omega$ )
$R_{ES}$	Increase in voice-coil impedance at $\omega = \omega_S$ for infinite-baffle system ( $\Omega$ )
$R_M$	Mechanical resistance ( $\text{N}\cdot\text{s}/\text{m}$ )
$R_{MS}$	Mechanical resistance of diaphragm suspension ( $\text{N}\cdot\text{s}/\text{m}$ )
$S$	Area ( $\text{m}^2$ ), Sones

$S_D$	Area of diaphragm ( $\text{m}^2$ )
$S_B$	Inside area of box wall ( $\text{m}^2$ )
$S_M$	Mouth area of acoustic horn
$S_T$	Throat area of acoustic horn
$SPL$	Sound pressure level (dB)
$SPL_{\text{sens}}^{1V}$	On-axis $SPL$ sensitivity for $e_g = 1$ V and $r = 1$ m (dB)
$SPL_{\text{sens}}^{1W}$	On-axis $SPL$ sensitivity for $P_E = 1$ W and $r = 1$ m (dB)
$S_D$	Piston area of diaphragm ( $\text{m}^2$ )
$S_P, S_V$	Port or vent area ( $\text{m}^2$ )
$T_{u1}(s)$	Transfer function which models high frequency pressure response of driver
$T_{u2}(s)$	Transfer function which models high frequency power response of driver
$u$	Mechanical velocity, Particle velocity ( $\text{m/s}$ )
$u_D$	Mechanical velocity of diaphragm ( $\text{m/s}$ )
$U$	Volume velocity ( $\text{m}^3/\text{s}$ )
$U_D$	Volume velocity emitted by diaphragm ( $\text{m}^3/\text{s}$ )
$U_L$	Volume velocity emitted by air leak ( $\text{m}^3/\text{s}$ )
$U_P, U_V$	Volume velocity emitted by port or vent ( $\text{m}^3/\text{s}$ )
$V$	Volume ( $\text{m}^3$ )
$V_{AS}$	Volume compliance of driver suspension ( $\text{m}^3$ )
$V_{AB}$	Effective volume of air in box including filling effect ( $\text{m}^3$ )
$V_{AT}$	Net volume compliance of driver and enclosure ( $\text{m}^3$ )
$V_B$	Volume of air in unfilled enclosure ( $\text{m}^3$ )
$W_{KE}$	Kinetic energy (J)
$W_{PE}$	Potential energy (J)
$x$	Mechanical displacement (m), Distance (m)
$x_D$	Mechanical displacement of diaphragm (m)
$x_{\text{max}}$	Maximum diaphragm displacement (m)
$Y_E$	Electrical admittance ( $\Omega^{-1}$ )
$Y_M$	Mechanical admittance (mech. $\Omega^{-1}$ )
$Y_A$	Acoustic admittance (acoust. $\Omega^{-1}$ )
$Z_e$	Impedance of lossy voice-coil inductance ( $\Omega$ )
$Z_E$	Electrical impedance ( $\Omega$ )
$Z_M$	Mechanical impedance (mech. $\Omega$ )
$Z_s$	Specific acoustic impedance (mks rays)
$Z_{VC}$	Voice-coil impedance ( $\Omega$ )
$\alpha$	Compliance ratio $C_{AS}/C_{AB}$ or $V_{AS}/V_{AB}$
$\delta$	Passive radiator compliance ratio $C_{AP}/C_{AB}$
$\epsilon$	dB ripple factor for Chebyshev alignments
$\eta$	Efficiency
$\eta_0$	Midband reference efficiency of driver
$\gamma$	Ratio of specific heat at constant pressure to specific heat at constant volume, Propagation constant for wave in acoustic horn
$\lambda$	Wavelength (m)
$\rho_0$	Density of air ( $1.18 \text{ kg/m}^3$ )
$\tau$	Time constant ( $\text{s}^{-1}$ ), Crystal coupling coefficient (N/C)
$\xi$	Particle displacement (m)
